Examiner's Remark

Applicant's amendment, filed on July 11, 2007, has been received and entered into the file. Claims 1-17 and 52-59 have been canceled. Claims 60-64 are new. The 102 and 103 rejections of claims 28 and 51 have been overcome in view of applicant's amendments/remarks and are hereby withdrawn. Claims 32, 35, 38, 40 and 44 are allowed because they have been rewritten as independent claims and have incorporated the indicated allowable subject matters in the claims.

Allowable Subject Matter

1. Claims 28-51 and 60-64 are allowed. The following is an examiner's statement of reasons for allowance for claims 28, 40 and 60. An examiner's statement of reasons for allowance for other claims has been provided in the previous office action and will not be repeated here.

Claim 28

-- wherein each of the feature vectors comprises a respective set of weights corresponding to respective ones of the features and the projecting comprises for each of the feature vectors determining a respective one of the weights from multiple values of a statistical measure that are derived from respective sets of image values corresponding to different respective regions of the input image.

Claim 40

-- projecting input image into a feature space spanned by multiple features to generate feature vectors respectively representing the candidate redeye pixel areas in the feature space,

Art Unit: 2624

wherein at least some of the features are contrast features corresponding to respective measurement of local contrast, a given contrast feature weight is computed based on a feature template and a feature plane, each feature plane is a scalar image computed from input image data and at least one feature plane corresponds to a mapping of input image data to one of a grayscale image, a CIE-Lab color space representation of the input image data, and a redness image.

Claim 60

-- for each of the candidate redeye pixel areas, determining a respective feature vector comprising weights, wherein the determining comprises calculating each of the weights in accordance with a respective feature template comprising a respective spatial pattern of basis regions each of which is associated with a respective rule for calculating a respective component weight value from values in a respective region of a scalar image derived from values of the input image, wherein the calculating comprises for each of the weights, calculating each of the respective component weights by applying the respective rules associated with the basis regions to values of respective regions of the scalar image, and combining the component weight values to produce the weight; and filtering from the set ones of the candidate redeye pixel areas classified as non-redeye pixel areas based on the determined feature vectors.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
